7.00 √ Flag question Marked out of Сопес 33344 33 and 4th lucky number is 34 and so on. Note that 13, 40 etc., are not lucky as they have other numbers in it. A number is considered lucky if it contains either 3 or 4 or 3 and 4 both in it. Write a program to print the Sample Input 1: nth lucky number. Example, 1st lucky number is 3, and 2nd lucky number is 4 and 3rd lucky number is 33 Sample Output 2: 34 Sample Input 2: Sample Output 1: The program should accept a number 'n' as input and display the nth lucky number as output. Explanation: Here the lucky numbers are 3, 4, 33, 34, and the 3rd lucky number is 33. ♠¶ KEERTANA AS 2024-CSE K2 ~ Recently accessed items Show more items [[] [[]
